## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/6/2009 has been entered.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. **Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Proni, U.S. Patent No. 6,088,466, published on 7/11/2000, (hereby Proni).**

4. As to claim 1, Proni teaches a loudspeaker (Figs 2a-2c) comprising a frame (20), a magnetic circuit (36b) held by the frame, a voice coil body (43) disposed so as it can move freely in a magnetic gap (45) of the magnetic circuit, a diaphragm (24) whose outer circumferential end is connected to the frame via a first edge (28), and a

suspension holder (38) whose outer circumferential end is connected to the frame (20) via a second edge; and a supporting section (52) attached to the voice coil body (43), wherein: a diameter of an inner circumference of the suspension holder (38) is greater than an outer diameter of the voice coil body (43) while a diameter of an inner circumference of the diaphragm (24) is greater (See Fig. 2c) than the diameter of the inner circumference of the suspension holder (38), the suspension holder (38) has an inner circumferential portion which is disposed on a top surface of the supporting section (The suspension holder is on an upward facing surface of supporting section 52) and is coupled via an adhesive to the voice coil body (The suspension holder is attached with an adhesive and coupled to the voice coil body via supporting section 52; Col. 10 lines 28-32), and the diaphragm is disposed on and in contact with the suspension holder at an inner circumferential end of the suspension holder such that the diaphragm is supported by the suspension holder (The upper surface of the suspension holder is adhered to cone 24; Col. 10, lines 32-34).

### ***Response to Arguments***

5. Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.
